

# Sharing grass related innovations to enhance the resilience of European dairy farms

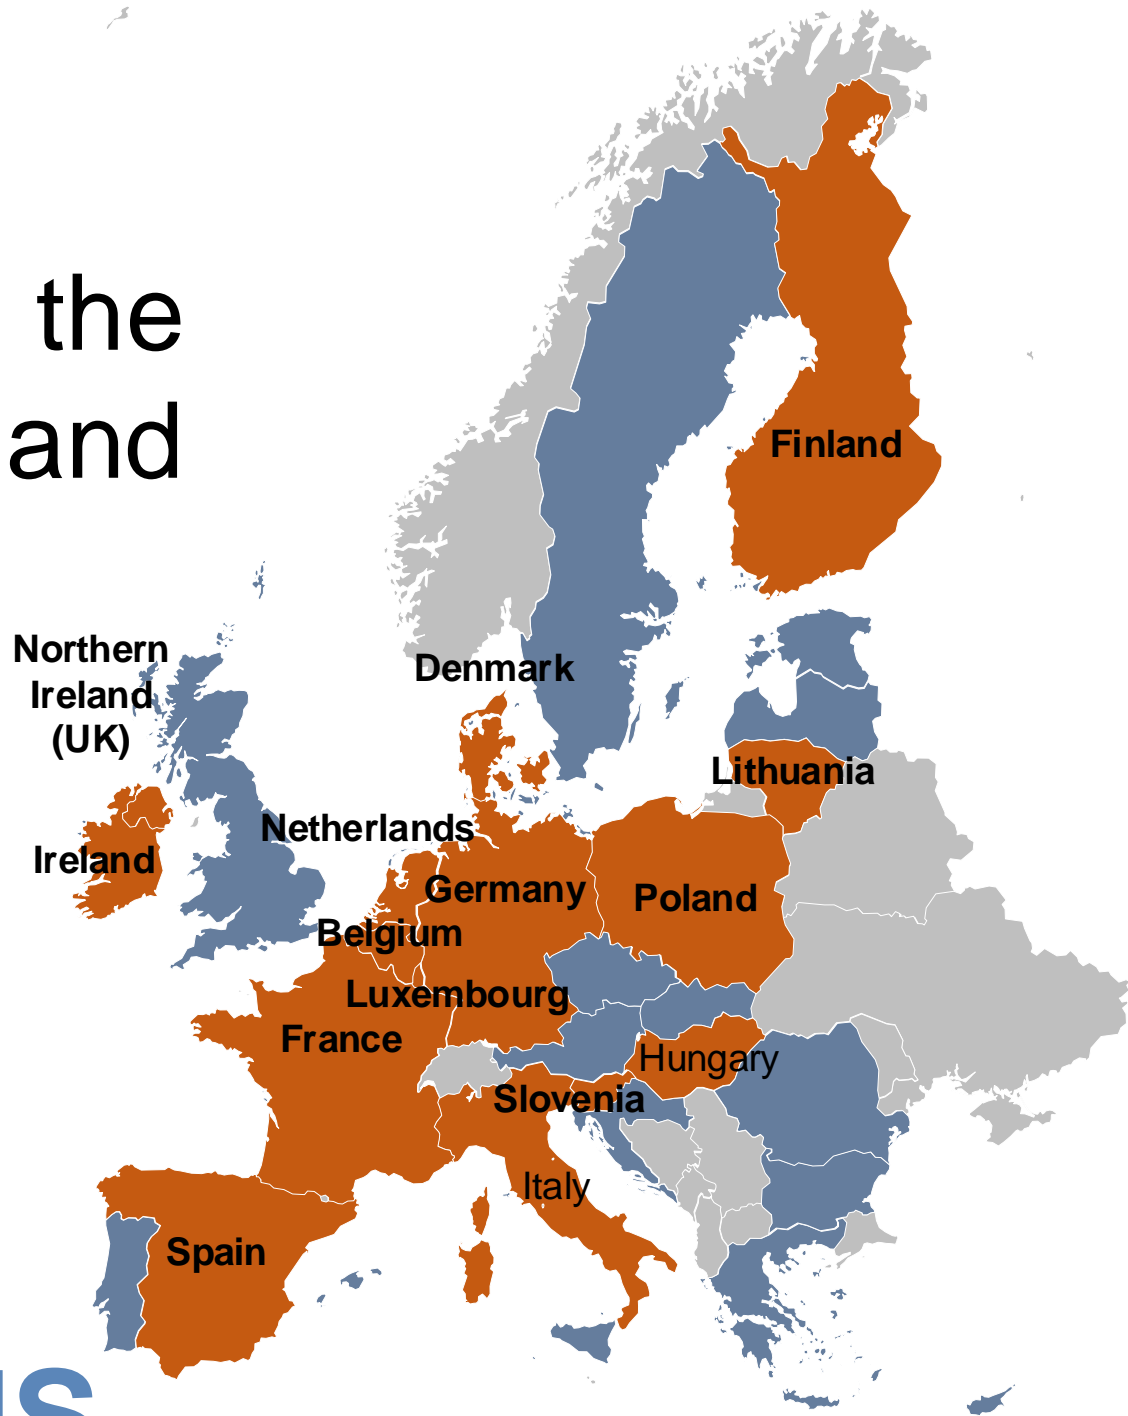

Resilience for Dairy (R4D) has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 101000770

## R4D, A EUROPEAN PROJECT TO CONTRIBUTE TO THE SOCIAL, ECONOMIC AND ENVIRONMENTAL DEVELOPMENT OF DAIRY FARMING.

This thematic network funded by **EU Horizon 2020 programme** was launched in January 2021. **18 organisations from 15 European countries** cooperate with the objectives to strengthen the exchange between farmers, researchers and relevant actors of the dairy sector and to share ideas and solutions through the cross-fertilisation of stakeholders.

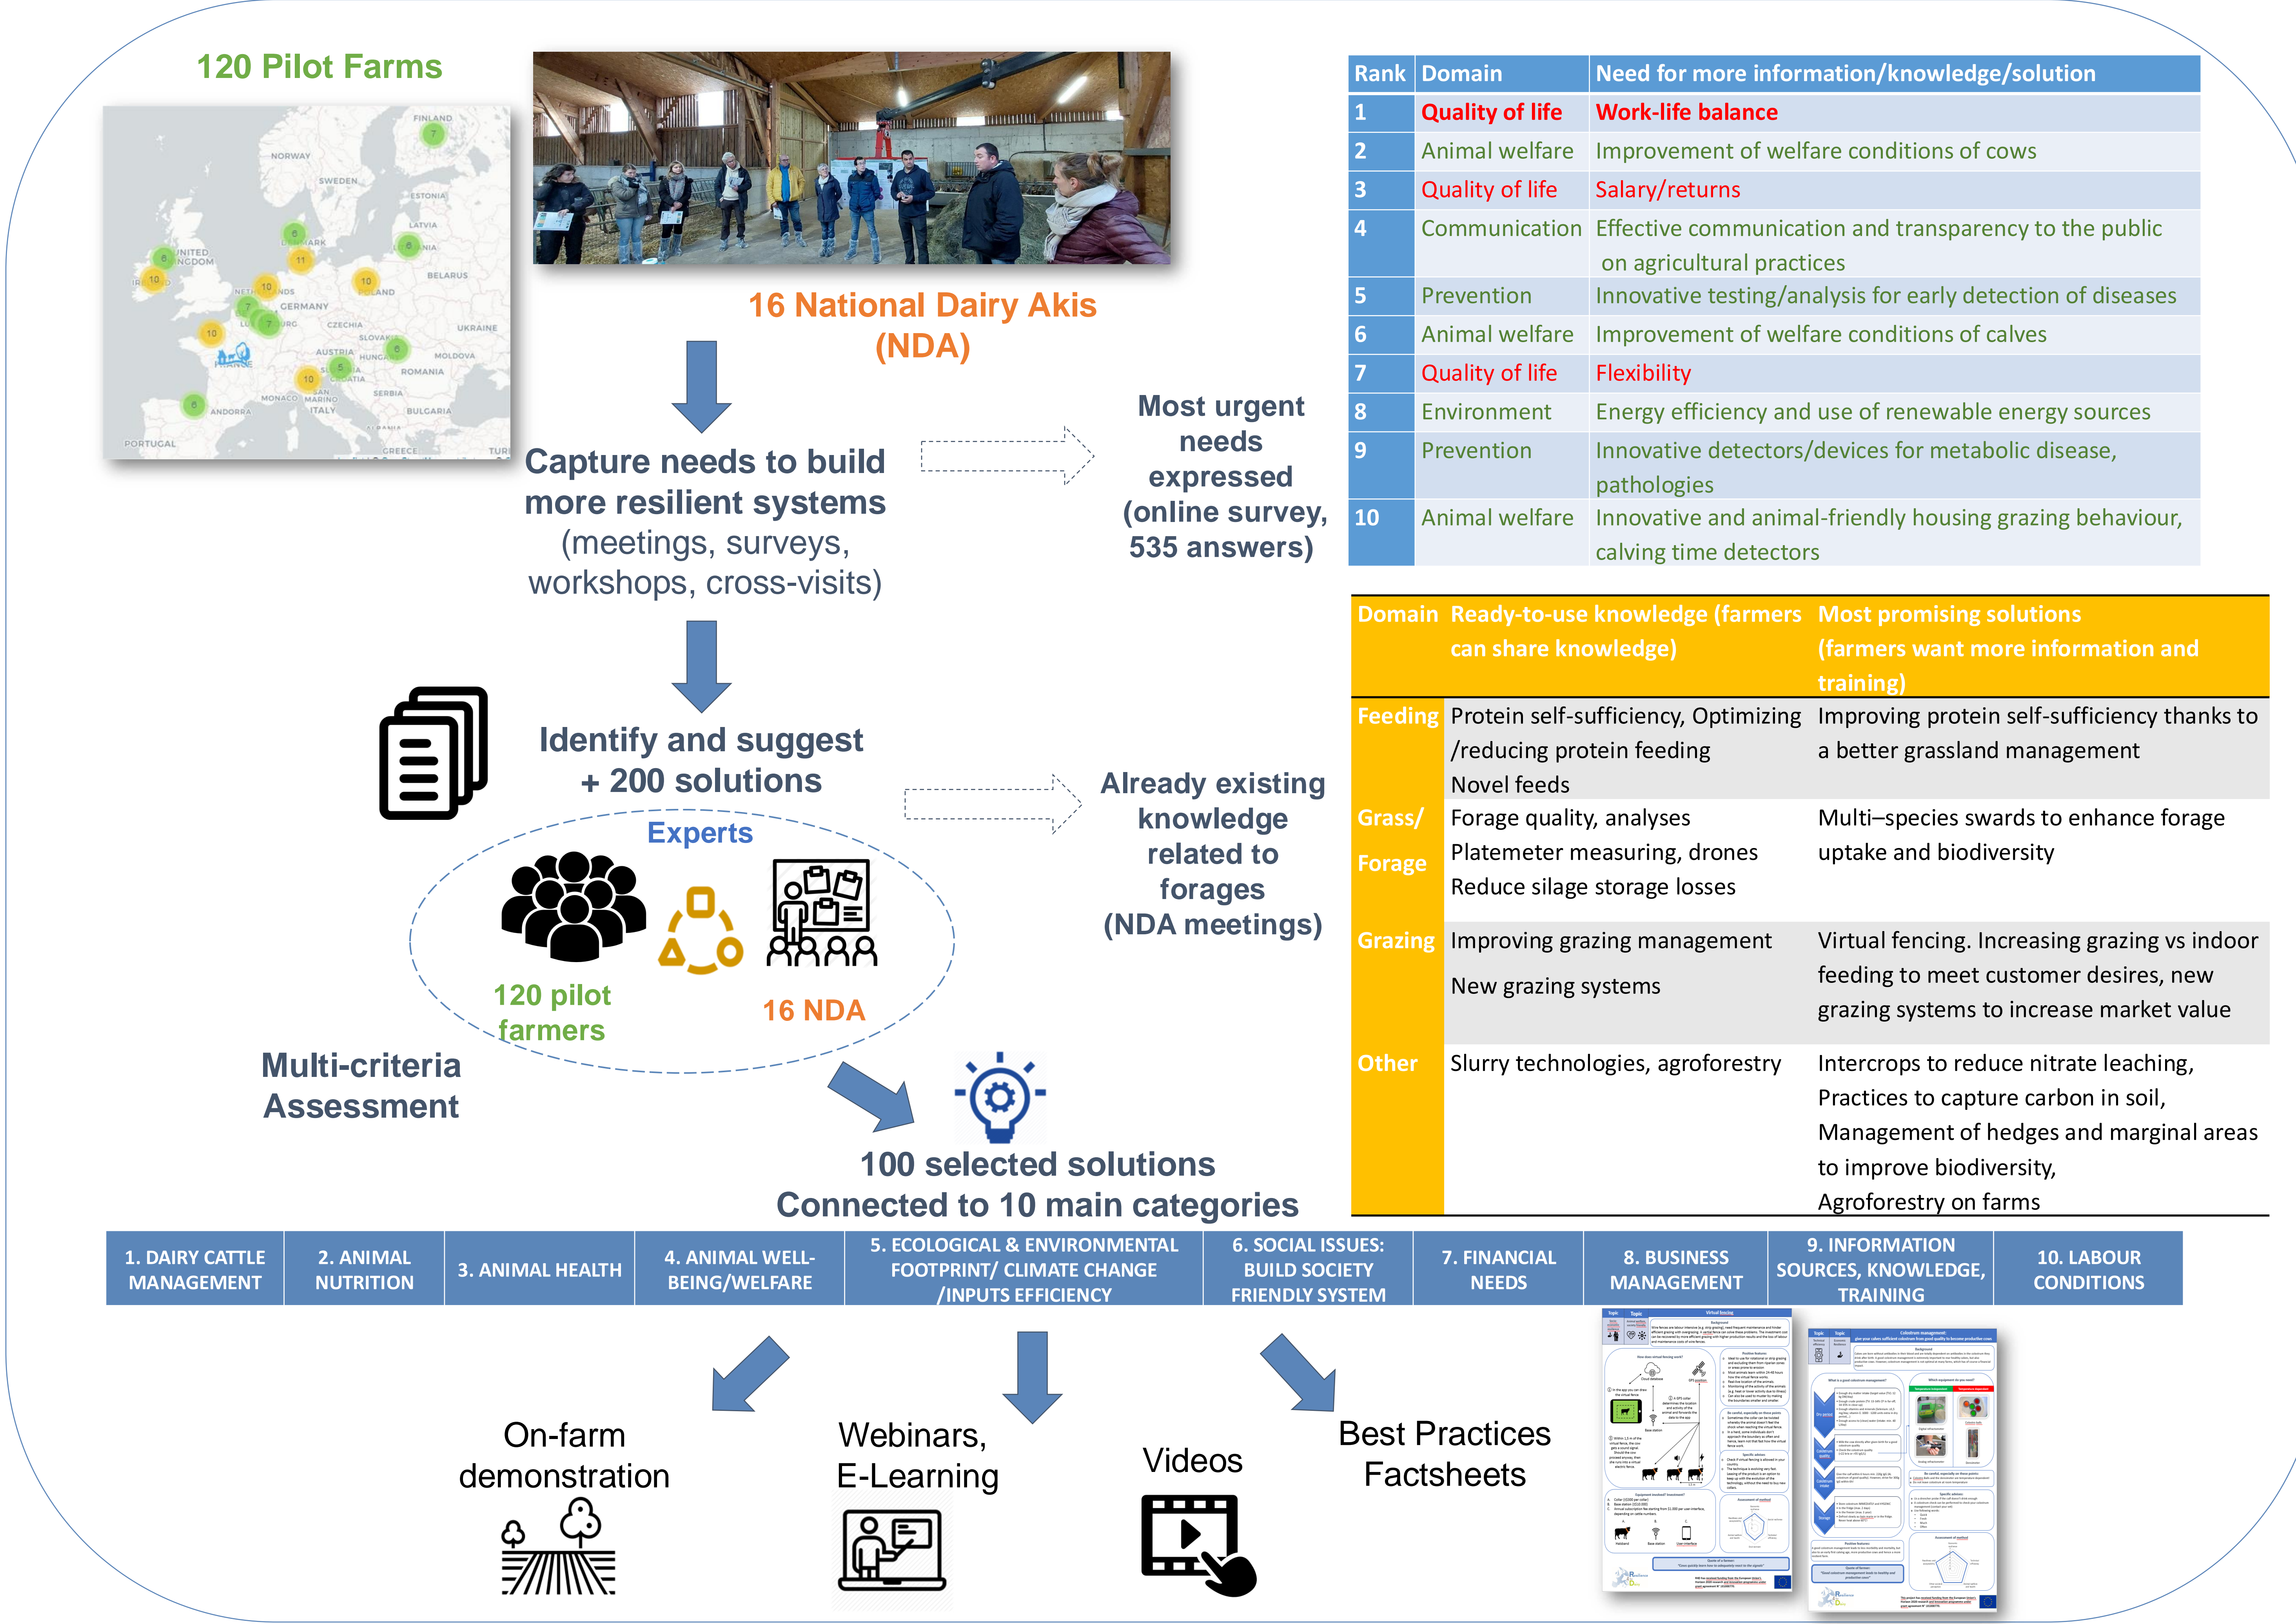

R4D focuses on **three knowledge areas** to enhance dairy farms' sustainability and resilience:

- 1. **Economic and social resilience**
- 2. **Technical efficiency**
- 3. **Environment, animal welfare and society friendly production systems.**

## FROM GATHERING NEEDS TO SHARING AND DISSEMINATING SOLUTIONS

We promote cooperation and facilitate knowledge exchange between farmers, researchers and other actors. For this purpose, we built **networks of pilot farmers and groups of key actors of the national dairy chains.**
