INNOVATIVE TECHNOLOGIES

Cowmanager:

- Fertility
- Feeding
- Health

Insemination window

10 to 22 hours after onset of heat alert¹
and/or
4 to 16 hours after onset of standing heat (After max heat level)²

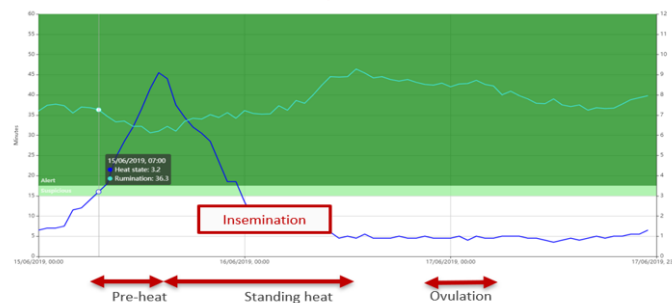

- Remarks**
- When using sexed semen, the insemination window would be delayed (Approximately 4 to 6 hours)³.
 - The duration of a heat and the onset of a heat are dependent of different factors, like environment, season, breed, age, nutrition and health.
